

MVP

The app should allow users to be able to see recommendations from other individuals who think a restaurant may be well received. Also, users of the app should be able to see the pictures of the food and the type of packaging they will be delivered in, if they're ordering for delivery. Exclusive app rewards would be available to frequent users of the app. Adding favorite restaurants may also be available so that users can set-up notifications for their preferred places of dining. If there is a special or perhaps a deal, it would then show up within the application.
